

SERENITY UPDATE

PRELOADED TRACKS

February 10, 2021

LESS MESS, LESS STRESS

We're always working on ways to improve the Serenity experience. In 2021 we now "preload" the track and soft close system. This solution allows us to streamline the process from shop to site even more.

As our systems already arrive complete with all pieces needed, our easy-to-install system just got even easier. Our team of professionals preload the track in-house with the soft close, wheel sets, trigger and stop (pictured left).

BENEFITS:

- Reduces installation time
- Minimizes complications
- Helps minimize lost parts
- Reduces labor cost
- Reduces waste

This move eliminates 9 installation steps (or 20%), helping to eliminate potential mistakes, reduce your labor costs, and minimize complications in the field. With less mess comes less stress - fewer parts to install means improved project delivery time and less headaches when it comes to onsite installation coordination.
