

SERENITY UPDATE

SOFT VS SPRING CLOSE

SELECTIONS FOR YOUR SYSTEM

At Serenity, we're all about helping you find the perfect configuration for your system. That's why we provide near endless hardware options to help meet your sound and safety requirements. Medical facilities, commercial offices and hotel rooms are no place for slammed doors. Safeguard your soundscape and provide privacy with our closing hardware. Call today to speak with a specialist about your system.

Our Soft Close

Our Soft Close comes standard with our system and serves to bring your door to a smooth and quiet controlled stop whenever the door is latching or coming to a close. German engineered and manufactured, this part is built to last with a cycle-test of over 100,000 cycles.

Our Spring Close

Available as an alternative to the Soft Close, our Spring Close uses a self closing mechanism to automatically pull the door to a closed position. Combined with a self latching lock, your system can close and lock automatically for added security and ease of use.
